A key strategy to help increase our daily physical activity is to increase the physical challenge of activities that we're already doing. Golf is one such activity that many lawyers already enjoy.

First, golf can be an aerobic activity if you play a fast game and without a golf cart. Adding a golf conditioning program is another great way to help raise your fitness level. It also can improve your game and add yardage to your drive. To get started, below are some stretching and strengthening moves to help you improve your health, stability, and vitality and also improve your game:

1. **Dorsi flex:** This is a simple toe tap that can improve flexibility. It stretches the gastrocnemius (calf) and strengthens the tibialis anterior (shin area). This simple, but effective stretch helps us with balance, flexibility and injury prevention. It's easy to do at the office, at home, or at play. Do 12 toe taps, each foot, 3-4 times per day.
2. **Calf stretch:** Put your feet parallel in a stride position with one foot in front of the other. Lower your back heel to the floor, and hold the stretch, static (not bouncing) for 15-20 seconds. Then switch. Repeat throughout the day to increase your flexibility.
3. **Quadricep Stretch:** Bend your leg gently at the knee with your foot towards your buttock until you can feel a gentle stretch on the front of the thigh. To increase the stretch, tilt your hips slightly backwards. Hold for 20-30 seconds and repeat 3 times. Do this at least 3 times a day.
4. **Seated Hamstring Stretch:** Bring your hands behind the back upper thigh, (not behind the fragile kneecap, but the belly of the hamstring muscle); extend your leg, and lift it up, alternately pointing and flexing the feet. Hold for 20-30 seconds, and repeat 3 times. Do this at least 3

times a day to reduce your risk of low back pain.

5. **The Plank.** This is a slightly advanced, simple, but effective bodyweight exercise. Holding the body (light as a feather) and stiff as a board develops strength primarily in the core—the muscles that connect the upper and lower body—as well as the shoulders, arms, and glutes. There are variations on this, and like other exercises and skills, it's good to build progression.

6. **Push-ups:** Wall push ups can do these anywhere and boost chest and arm strength.
7. **Squat:** Targeting the legs and gluteals, squats are an excellent way to warm up your core, especially prior to stretching, and power up your energy and strength.

In a golf swing, 33 major muscles are activated. Also, the nature of golf is that is a highly repetitive activity, often at a relatively high level. Because golf involves core flexion and rotation in the swing, and bending over and over again and again to pick up the ball (up to 200 times/game), there tend to be higher incidences of chronic low back pain among golfers. Light rhythmic strength training, and stretching can help reduce the risk of aches and pains. It's a good idea to speak with your golf pro or a kinesiologist about ways you can improve your swing, and your biomechanics.
