

# How To Be Happier? Make it a Priority

Contributed by: Anne Brafford, JD, MAPP, PhD In Progress  
 abrafford@aspire.legal | www.aspire.legal

**W**hile genetics play a role in our patterns of happiness, our biology doesn't have to be our destiny. Much about our genetic makeup is malleable. Also, our life circumstances and factors within our voluntary control play a big role in our level of happiness (Lyubomirsky et al., 2005). This is good news. It means that even those born with a genetic tendency for gloominess have an opportunity to take control over factors that can significantly increase their well-being.

## HAPPINESS IS WORTH THE EFFORT

Most of us would like more happiness in our busy lives, and science shows that it's worth making an effort. People with a Positive Emotional Style (PES)—who tend toward positive emotions—are more resilient, healthier, and happier. Among other things, they have fewer symptoms of anxiety and depression; live longer; have better immune systems, cardiovascular health, and pulmonary functioning; and have higher life and work satisfaction (Brafford, 2017). Science suggests that creating a personal Happiness Plan can contribute to our health and success.

## PRIORITIZE POSITIVITY

When designing your own Happiness Plan, you'll want to keep in mind that, for evolutionary reasons, bad is stronger than good: Negative emotions are much stronger than positive ones. We're hardwired to react more strongly to bad things. As a result, we're not likely to feel happy (and experience the related beneficial effects) unless our positive emotions outweigh bad ones.

To feel happy, shoot for a ratio 3-5:1. In other words, try to offset every negative experience with three to five positive ones. This is not to say that we should strive to eliminate negative emotion (which would be impossible anyway!). Negative emotions are useful.

They let us know, for example, when we need to make important changes and often accompany early stages of growth activities. But if negative emotions dominate our lives, our health and well-being will suffer. Especially if you experience a high frequency of negative emotions as a regular part of your work (as lawyers often do), you may need to consciously seek out good things to restore your equilibrium after something bad happens. No one said happiness didn't require some work!

But be aware that pursuing happiness for its own sake can backfire and make us less happy. The best strategy is to deliberately plan daily opportunities that can lead to naturally-occurring positive emotions (Datsu & King, 2016). Focus on the journey, not the destination. The benefits are greater positive emotions and well-being.

## CHOOSE HIGH-VALUE HAPPINESS ACTIVITIES

Not all activities that trigger short-term positive emotions contribute equally to our long-term happiness. Scarfing down an entire pizza with extra cheese, for example, may give me a jolt of temporary pleasure, but it's unlikely to do much for my long-term well-being. Activities that will give the biggest boost to our health and happiness are those that support our basic needs as continually-evolving

human beings. The challenge will be to figure out how to include more activities that support these needs into your everyday life. It won't happen by accident.

- ✓ **Connection & Belonging.** We humans have a fundamental need to connect and belong. This includes supportive relationships as well as a sense of belonging or fit with groups we care about. A sizable body of inter-disciplinary research shows that this need is powerful and pervasive. It can help or harm our cognitive processes, emotional patterns, behaviors, and health and well-being. A poor sense of belonging and feelings of exclusion can trigger self-defeating behaviors like procrastination, lethargy, and depression.
- ✓ **Mastery Activities.** Our fundamental needs also include feeling confident in our ability to master new skills and to have an impact on our environment. Continuous learning and a growing sense of mastery in activities that are significant to us are keys to this source of well-being.
- ✓ **Maximize Autonomy.** A third fundamental need is driven by a basic human desire to be “self-creating” and under self-rule. It's about feeling authentic and like the author and architect of our own behavior—that our behavior aligns with our interests and values and is within our responsibility and control.
- ✓ **Help Others.** Research also suggests that we have a basic need to feel that we're benefiting others or the common good.
- ✓ **Do Something Meaningful.** We often waste our scarce free time by mindlessly watching TV, paging through gossip magazines, reading click-bait on the Internet, or perusing social media. These don't contribute much to our sense of meaningfulness in our lives or work--which research shows is powerfully related to health and happiness. Meaningful activities include those that make us feel that we're doing something

significant within your own values system and/or that help us make progress toward goals or a general purpose.

## PLAN & TRACK YOUR PROGRESS

It may seem counter-intuitive but, like anything worth doing, increasing happiness will take effort and planning. Below are suggested steps to get started on your Happiness Plan:

- 1. Learn Your Behavior Patterns.** Much of our behavior is so automatic that it occurs outside of our awareness and as a matter of habit. To begin to change our patterns to boost well-being, we need to gain better awareness of them. A good way to do so is to create an Activity and Mood Monitoring Chart. For a week or more, complete an activity log (sort of like your billable time log) on an hour-to-hour basis. Write down brief statements of what you are doing each hour (Addis & Martell, 2004).
- 2. Learn Associated Moods.** Next, for each activity, write down a few words that describe how you felt during the activity. Words might include, for example, happy, joyful, passionate, angry, anxious, or sad. Rate each emotion on a scale of 1 to 10, with 10 being the most intense (Addis & Martell, 2004).
- 3. Review What You Noticed.** After you've created your logs for a week, review them and identify patterns. Did your moods vary or not? Are there common times of the day that are more difficult or easier for you? Are there situations that routinely make you happy or are associated with negative emotions? (Addis & Martell, 2004).
- 4. Identify Behaviors That Have Positive/Negative Impact.** Next, review your logs and identify what activities or behaviors made you feel bad on a regular basis. Consider what alternatives you may have that can make you feel better or improve the situation. Also identify activities and behaviors that regularly boosted your mood. Consider why that was so and how you can increase those ingredients in your daily schedule.

## 5. Create a Schedule of Mood-Boosting Activities.

After looking over the behaviors, activities, and alternatives from Step 4, create a daily log for the upcoming week in which you schedule do-able activities that may help you avoid negative experiences and increase positive ones. Also try to choose high-value happiness activities that are most likely to have the biggest positive impact:

	MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY	SATURDAY	SUNDAY
8:00 am							
9:00 am							
10:00 am							
11:00 am							
12:00 pm							
1:00 pm							
2:00 pm							
3:00 pm							
4:00 pm							
5:00 pm							
6:00 pm							
7:00 pm							
8:00 pm							

- How can you connect more frequently with people who give you energy? How can you foster a greater sense of belonging inside of work and in non-work activities? What can you do to contribute to others' sense of connection and belonging?
- What can you do to support your need for continual learning and mastery--both inside work and in non-work activities? How can you help others do the same?
- How can you more effectively plan your schedule and activities so that you feel that they are more aligned with your own interests and choices? How can you reduce feeling that you're being "bossed around" by your schedule and others' demands? How can you help support others' autonomy?
- What can you do each day or each week to support others or the common good? How can you highlight for others how their contributions have helped you, clients, or others?

- How might you foster a greater sense of meaningfulness in your work and non-work life? What can you do to ensure that meaningful activities are prioritized over mindless activities? How can you help others feel a greater sense of meaning?

Start relatively small so that you can ensure early wins that will fuel your motivation to keep at it. As you pick up momentum, you can increase the difficulty of your goals and begin designing realistically ideal days that are filled with more positive experiences.

**6. Adopt a Mindset of Curiosity.** As you progress through these steps, do so with an experimental (not a judgmental) mindset. Notice how you feel and whether your plan is working or not. No matter what the outcome, you're likely to learn something useful. Keep trying new experiments to discover what works best for you.

**7. Periodically Measure Your Happiness.** To test whether your Happiness Plan is working, consider measuring your level of happiness with a validated scale. To get a base line, take a happiness survey before you launch your Happiness Plan. Then repeat the survey in six-week intervals and keep track of your results. You might find your happiness levels perking up!

One good measure to use is Subjective Well-Being, which is discussed in the Assessments section of the Toolkit. It measures life satisfaction and your balance of positive to negative emotions. It has been linked to many positive well-being consequences.

If you're experiencing depressive symptoms, you might also decide to use a depression scale to track your progress--such as the [CES-D Scale](#) discussed in the Assessment section. The recommendation here to prioritize positivity is similar to what's called "behavioral activation." This is a cognitive behavioral-based strategy for overcoming depression and other mental health difficulties that's been used effectively as part of self-help programs and in conjunction with clinical therapy (Addis & Martell, 2004). The strategy

involves identifying one's values and scheduling daily activities to better align with those values. To learn how to take a structured approach to behavioral activation, Drs. Michael Addis and Christopher Martell's award-winning workbook [Overcoming Depression One Step at a Time](#) guides readers through helpful exercises.

## CONCLUSION

As the above reflects, for many of us, making up our minds to be happier and healthier by prioritizing positivity is likely to have the intended results. Fellow lawyer Abraham Lincoln appears to have had it about right when he said, "Folks are usually about as happy as they make up their minds to be."

## High-Quality Happiness Activities

### Connection & Belonging

Supportive relationships and a sense of belonging or fit with groups we care about.

### Mastery Activities

Continually learning, growing, and gaining confidence in our ability to make things happen.

### Autonomy

Feeling that our choices are self-authored and aligned with our own preferences. The opposite of feeling controlled, forced, or guilt-driven.

### Helping Others

Having a positive impact on others or the common good.

### Meaningfulness

Feeling that our activities are significant within our own values system.
